Alternative Minimum Tax Calculator

The Alternative Minimum Tax (AMT) is a separate tax calculation that is intended to prevent high-income taxpayers from not paying their fair share of taxes through an excess use of deductions and credits. Taxpayers with an AGI greater than the AMT exemption are required to calculate their income tax using both the standard income tax calculation and the AMT calculation and pay the higher amount.

The AMT is calculated by starting with the adjusted gross income (AGI) from form 1040, line 11b, then adding back certain deductions and adding some additional income. This amount is the AMT Income. Then, an AMT Exemption amount is determined based on the AMT Income. The AMT Income minus the AMT Exemption is taxed at 26% or 28%, which is the amount of the AMT.

To calculate the AMT using this tool, enter information from the federal tax return in the green fields. The amount of the AMT, if any, will be in the blue field at the bottom. Click [this link](#) for more help with this tool.
